

Artificial intelligence

Are people comfortable with the idea or not?

By: A Shaikh

Are people comfortable with artificial intelligence?

People's opinions will vary. Some people might be uncomfortable with the idea because if robots were to replace humans, this may result in unemployment.

Also, as much as we enjoy being lazy, many people feel uncomfortable being in the presence of a machine which can listen in on you.

Pros of AI

Pros

- Very convenient for lazy people
- Provides much more help and information
- Always there for your needs
- Does not get tired and break easily

Cons of AI

Cons

- Humans are becoming more lazy.
- Machines lack in creativity.
- Can also malfunction
- Excessive cost

My opinion on AI

I think that artificial intelligence can help us but at the same time people can be threatened by the presence of it .

As a result of this, I think it's more reasonable to keep artificial simple and not to develop this technology further.

Did you know? A hotel in Japan called Henn-Na-Hotel is Japan's first hotel to be completely run by robots!
