

DRIVERLESS CARS

PRESENTED BY H PATEL

WHAT ARE SELF DRIVING CARS?

- A driverless car is a car that drives itself. Self driving cars are now very useful and common as people are becoming lazier by the day, so now they are buying self driving cars to make it easier for them.

Did you know that self driving cars were first created in 1939?

WHICH COMPANIES HAVE SELF DRIVING CARS?

- In the last few years, Tesla has created self driving cars. **Full self-driving"** is a \$10,000 driver-assist feature offered by **Tesla**. However Tesla is not the only company which created self driving cars, there are many others like Uber, Cruise, Voyage etc..

WHAT ARE THE ADVANTAGES AND DISADVANTAGES?

Advantages

- A lot easier and less effort.
- Finds fastest routes.
- Makes fewer mistakes.
- More convenient driving experience.
- Higher attention spans
- Follow traffic rules

Disadvantages

- High costs
- Insurance issues
- Technical errors
- Hacking issues
- Higher unemployment rate e.g., less cab drivers

ETHICAL ISSUE

- Are roads with driverless cars on them safe for everyone?

MY OPINION

My opinion is to not buy a self driving car.

This is because it makes me feel safer when a human is in control. Also, a self driving car can be prone to technical errors and hacking issues.
