

# *Recycling aluminium*

*By: Salha Ali*

## Why should we recycle aluminium?

---

- We should recycle because it will mean that we don't need to mine that often.
- Mining messes up the landscape and can disturb animal's habitat's.
- We are releasing less greenhouse gasses in the air.

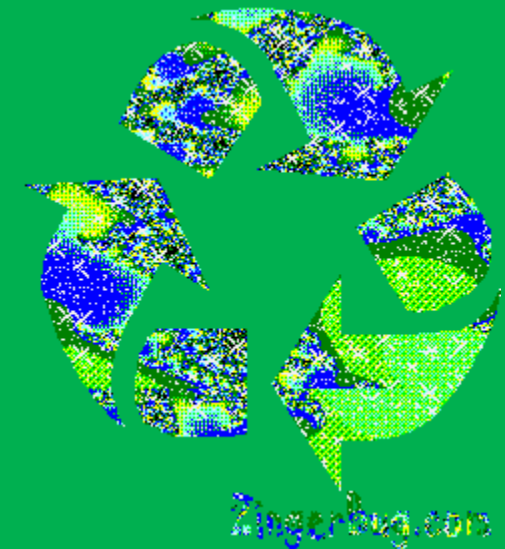

# The benefits...

- If we do, then a lot of waste is saved from going to landfill sites
- We can also prevent our excess rubbish from ending up in the ocean so marine animals won't be affected.
- If we recycle the we get to unleash our artistic side and we get to save the planet!
- After all, small actions make a big difference! :)

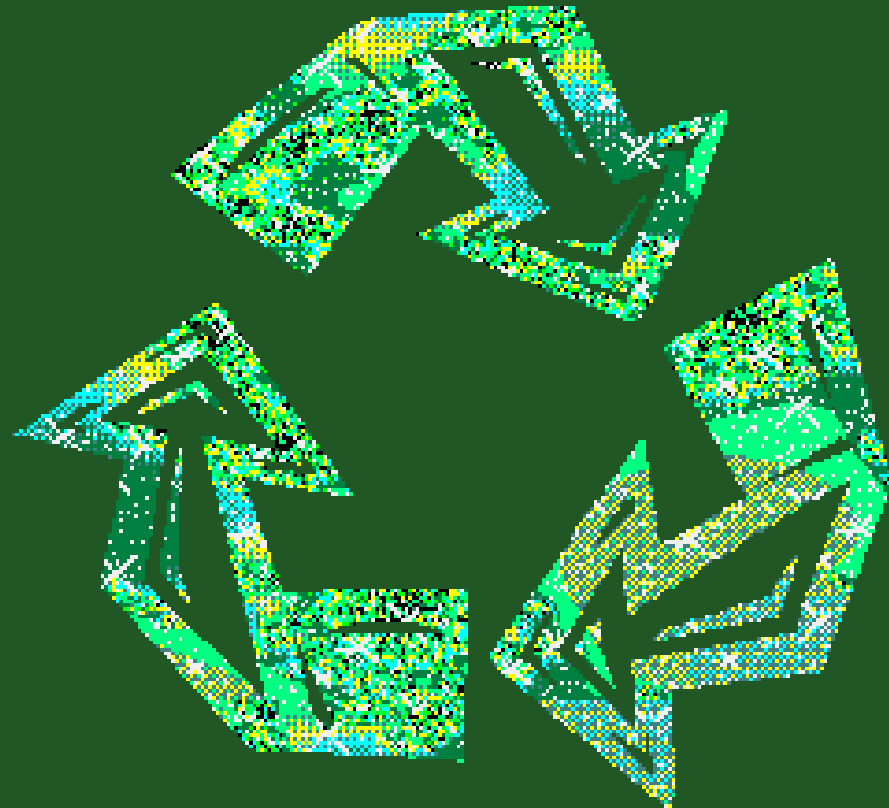

# ...the consequences

- We ruin the landscape and nature
- Aluminium is a finite resource so it's a limited resource so we don't have a lot of it left now.
- It's costs money to go mining and that will be added to our yearly taxes.
- It also costs a lot of energy to.

# ...how we can help

- We can try to upcycle our old stuff and turn it into something new and useful we just need to be creative!
- This way we can try to empty out the landfill sites
- A great example of this is Mt. Recyclemore that is a recycled version of Mt. Rushmore in the USA
- Lots of waste has been used for this in an ordinary landfill

# So, if you calculate...

For every 1kg of aluminium cans, you save:

- 95 percent of mining costs to get fresh aluminium.
- 4kg of aluminium ore
- A lot of waste.

*Jazakullah for  
listening!*
